

AMaT

Audit Management and Tracking

For healthcare

Clinical Audit & Improvement, in your hands

We are delighted to be working with the Innovation agency, who are helping us share our story of who we are and how we can help the NHS. They believe our product has the potential to make the capture, analysis, reporting and engagement of clinical, ward and area audit data from ward to board better, safer and faster.

Introducing AMaT: The Audit Management and Tracking tool to streamline all of your auditing and improvement requirements into one simple, easy-to-use system.

AMaT is an innovative system designed to make auditing easier, faster, and more effective.

Auditing is a vital part of healthcare, helping to improve patient care, manage risk, and comply with reporting requirements. But it is also time-consuming, labour-intensive, and often slow to deliver results and actions. **AMaT** was created to give you more control over your audit activity and to provide real-time insight and reporting for clinicians, wards, audit departments and healthcare trusts.

AMaT is easy to implement, and simple to use. Data can be input and accessed in real time on a smartphone, tablet, laptop or desktop computer, giving healthcare staff increased flexibility and mobility - and more time to spend with patients. Because it's a web-based system, you can securely share information with others instantly. What's more, it's customisable to meet the specific needs of your department or organisation.

See audit results instantly. AMaT is designed around a dashboard system, which means the results of your audit and improvement data can be seen at a glance in easy-to-read graphical presentations.

Whether you need to share audit results trust-wide, or tailor them for specific specialities and divisions, AMaT will help you increase awareness and education throughout your organisation.

The dashboards provide clear visuals for your audit data, giving you real-time insight into how well you're performing, and providing the ability to react swiftly to implement change and improvements where necessary.

AMaT is intuitive and simple to use, but the technology behind it is powerful, enabling you to easily create and track

hundreds of audits. It works seamlessly with all elements of your audit process: import data from other sources; create pro formas and questionnaires; send instant email notifications to co-workers for their input; submit reports to managers, and generate completion certificates - from your desktop or mobile device.

Clinical Teams and AMaT

On the frontlines of patient care, doctors, nurses and healthcare professionals are responsible for hundreds of clinical audits.

Audit is an essential tool for clinicians to understand where services are performing in line with standards or where improvement is needed for better patient outcomes. **AMaT** allows clinical teams to register audits, associate related guidance, complete audits online, and manage action plans and scheduling. A timely and efficient solution - and one that means more time spent at patient bedsides.

The key benefits of AMaT for Clinical Teams are:

- **Simplicity** – register audits online and create digital pro formas
- **Accuracy** – collect data using smartphones or tablets: no more legibility issues, lost paperwork or rekeying data
- **Compliance** – audit checks to ensure they conform with standards and guidance
- **Control** – step-by-step guidance through the audit; all action plans and scheduling are managed
- **Clarity** – dashboards clearly show audit activity, actions and progress; generate standard reports with a single click
- **Portability** – audits are saved in a cloud portfolio accessible even if the clinician changes Trust

Ward Teams and AMaT

Ward-based audits are a daily part of clinical areas. But given the amount of time, labour, and paperwork involved, they can be challenging to implement effectively, and documentation can be easily duplicated or omitted.

The **AMaT** system allows for a structured approach to ward-based audits, promoting a paper-free auditing environment for audits from 'infection control' to 'essentials of care', increasing accuracy and improving the reporting of compliance with standards.

Because it is web-based, **AMaT** centralises your data, generates notifications and reminders, and gives you real-time visibility into performance against benchmarks.

The key benefits of AMaT for Ward Teams are:

- **Simplicity** – create ward-based audits such as 'infection control' and 'essentials of care' online: it's goodbye to paperwork!
- **Accuracy** – collect data using smartphones or tablets; no more legibility issues, lost paperwork or rekeying data
- **Control** – control the allocation and scheduling of audits to relevant wards; **AMaT** also generates automated notifications and reminders
- **Clarity** – the **AMaT** dashboard clearly shows audit activity, actions and progress and presents a dynamic trend analysis; generate standard reports with a single mouse click

CQC Inspections and AMaT

AMaT is designed to help inspections go smoothly by streamlining accessibility to your organisation's audit activity and data

AMaT's real-time dashboard results give instant visibility with audits individually associated with the five key CQC domains. Reports can be generated to demonstrate current and past activity within these areas.

AMaT intrinsically provides the following benefits for inspections:

- **Simplicity** – direct, instant access to all audit records, resulting in quicker and more accurate inspections that take up fewer administrative resources
- **Compliance** – access audit activity reporting based on guidance and CQC domains
- **Evidential** – review actions and improvements resulting from audit activity
- **Clarity** – generate dashboards to clearly show ward and cumulative audit trends; graphs and charts can be exported and fed into inspection reports
- **Autonomy** – review AMaT results independently

Clinical Audit Departments and AMaT

AMaT provides Clinical Audit departments with the ability to shape and control audit activity within their organisation.

Compliance with standards can be monitored closely, forward plans easily generated and re-auditing promoted across the organisation.

The key benefits of AMaT for Audit Teams are:

- **Simplicity** – notification of all new audits; create and issue ward and cumulative audits online
- **Leadership** – generate and monitor forward plans, and manage audit meetings and communications
- **Control** – receive a series of 'traffic light' status and deadline prompts – **AMaT** is a virtual audit PA
- **Accessibility** – comprehensive audit search tools enable specific data to be quickly pinpointed
- **Visibility** – the dashboard can be set to summarise all current audit activity across the Trust and the forward plan; there is also dynamic, real-time access to the detail behind the dashboard

The Trust and AMaT

AMaT provides management with a high-level overview of audit activity and results throughout the Trust

Early identification of negative trends or compliance gaps means faster, more efficient response to issues of concern throughout the organisation. And because the AMaT system is web-based and designed to improve collaboration and communication, you can invite peer organisations to audit using the online data capture facility, compare results and findings.

The key benefits of AMaT for the Trust are:

- **Accessibility** – access all current, planned and historic audit activity: it's all in one secure cloud portfolio!
- **Compliance** – view audits relating to guidance, governance and compliance
- **Control** – receive early notification of negative trends in ward and cumulative audits: it's management in real-time
- **Analysis** – filter progress dashboards by division, clinical speciality and more; audit data can be exported for use in third-party business intelligence tools
- **Community** – invite other Trusts and third parties to participate in audits; makes benchmarking a proactive and positive activity
- **Guidance** – new enhanced guidance features, including automatic NICE guidance updates, action planning and dashboard reporting
